## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. **Claims 1-23**, drawn to a catheter and method of positioning a biliary catheter, classified in class 604, subclass 103.04.
- II. **Claims 24-29**, drawn to a method of exchanging a catheter during a biliary endoscopic procedure, classified in class 606, subclass 46.

The inventions are distinct, each from the other because of the following reasons:

**Inventions I and II are unrelated.** Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, group II discloses a method using an endoscope having different modes of operation, different functions, and different effects.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
